Subject: Points of Discussion Prior to MOU Finalization

Dear Nik & Vitruveo Team,

As we move closer to finalising the Memorandum of Understanding between VTRU & LensPost, I would like to clarify and discuss a few critical points to ensure mutual understanding and agreement:

- **Infrastructure and Hosting Charges:** LensPost will assume responsibility for all hosting and infrastructure expenses for the first 6 months post the dApp going to production. Commencing from the 7th month we will share a monthly invoice that includes maintenance & infra costs - which will encompass services such as AWS, Remove Background, Generative AI, Meme Stock templates, and CDN.
  - For example, we deploy the app in March - so till Sept we will bear the upkeep/charges, from Oct onwards we will share a monthly invoice till we mutually decide to dissolve the partnership.

- **Payment Processing Approach:** We propose discussing the integration of payment flows. We prefer having third party service for both crypto and credit card payments, Building crypto payment options in-house will increase the development scope.
- **Requirement of Dashboard:** We foresee post enabling of payment flows, users would probably require dashboard to check their earnings/payment withdrawal to their wallets/bank accounts etc - **Would you like this to be included in our scope?**
- **Clarification on Terminology** - "Beta" and "Production Launch": We seek further specificity regarding the transition from beta to production launch. Our understanding is that the primary distinction in this transition involves the integration of NFT minting functionality and subsequent publication on the Vitru network.

We believe addressing these points will contribute significantly to a seamless collaboration. Looking forward to a fruitful discussion and alignment on these aspects.

Best regards,

Cyber Shakti
